

**EFORT Webinar : Treatment Options Of Unicondylar Knee Osteoarthritis In The Young Adult**

**Tuesday 7 November 2017 | 19:00-21:00 CET**

Age is the major risk factor for osteoarthritis (OA) of the knee, however young people can also have OA. The aetiology is usually different in young population than the elderly population. Diagnosis is often delayed and sometimes difficult because of higher tolerance to pain. Some considerations should be taken into account when choosing a treatment modality in young due to their high expectations. Bearing this in mind, the diagnosis and treatment of knee OA in young adults should be well scrutinized.

In this regard, the learning objectives of this webinar are:

- To recognize the young knee OA
- To classify/score the level of OA
- To predict the outcome
- To choose the optimum treatment modality

This Webinar is organised by EFORT; independent of any commercial educational support, hosted by [VuMedi](#), a video education platform for doctors wherein over 200,000 doctors use VuMedi to improve patient care and grow their practice.

**Webinar information and Online registration page:** <https://www.vumedi.com/webinar/treatment-options-of-unicondylar-knee-osteoarthritis-in-the-young-adult/>

**The registration process:** [login on your VuMedi account](#) directly from the webinar URL and click on the YES button to register on the webinar or [create your own VuMedi account](#), then click in the [webinar URL and click on the YES button](#). A confirmation email will be sent to you as soon you register for the webinar and reminder emails will be received **one day** before the event.
